

# Remco Product Selection Guide

## Remco & Vikan Scoops

Remco is Vikan's dedicated North American company.

# Remco and Vikan Scoops

- These fully color-coded hand scoops (6300x, 6400x, 6500x) are great for moving small amounts of material. Their solid construction makes them extremely durable. They have no seams or cracks, which helps prevent bacterial growth.
- Remco Hand Scoops are commonly used in baking, meat, poultry, seafood and milling applications. They are used with everything from fine powders, to large food particles, and even ice.
- Remco Mega Scoop(6550x) and Mega Dipper(6552x) are used for measuring and moving a variety of food particles and liquids.
- The Mega Dipper can be connected to Vikan handles to reach into vats and other difficult-to-reach areas.
- The new Vikan Round Bowl Scoops(5681x, 5682x) are ergonomic, lightweight, and durable. They are designed with a pouring spout on two sides to enable both left and right hand users to pour from the scoop. There is a measuring scale inside the scoops for product testing and other applications as well. Their one-piece construction eliminates seams where bacteria can hide. The smooth surface makes the scoops extremely easy to clean.
- The Vikan Round Bowl Scoops work very well with Vikan pails and are ideal for use in food production areas for moving food ingredients, liquids, etc.
- The Vikan Dustpan(5660x) has a sharp edge so that food particles can be efficiently brushed into it. The neck joint can withstand strong downward pressure. It is used in all kinds of industries on surfaces like floors and tables.
- The Remco Lobby Dustpan Set has a large bin that allows for big and small cleanup jobs while the tall handle alleviates back pain that stems from leaning over shorter dustpans.
- The Remco Utility Dustpan(6350) features a wide pan so it can easily collect debris.  
*\*Remco Utility Dustpan is not FDA Compliant.*
- Dustpans can be used with brooms and brushes to collect dirt and dust, or with squeegees to collect food particles.
