Maintenance & Storage

Maintenance & Storage

- Are all of your tools stored off the ground?
- Does your tool storage reinforce your color program?
- Do you have easy and efficient access to tools when needed?
- What determines when a tool comes out of service?

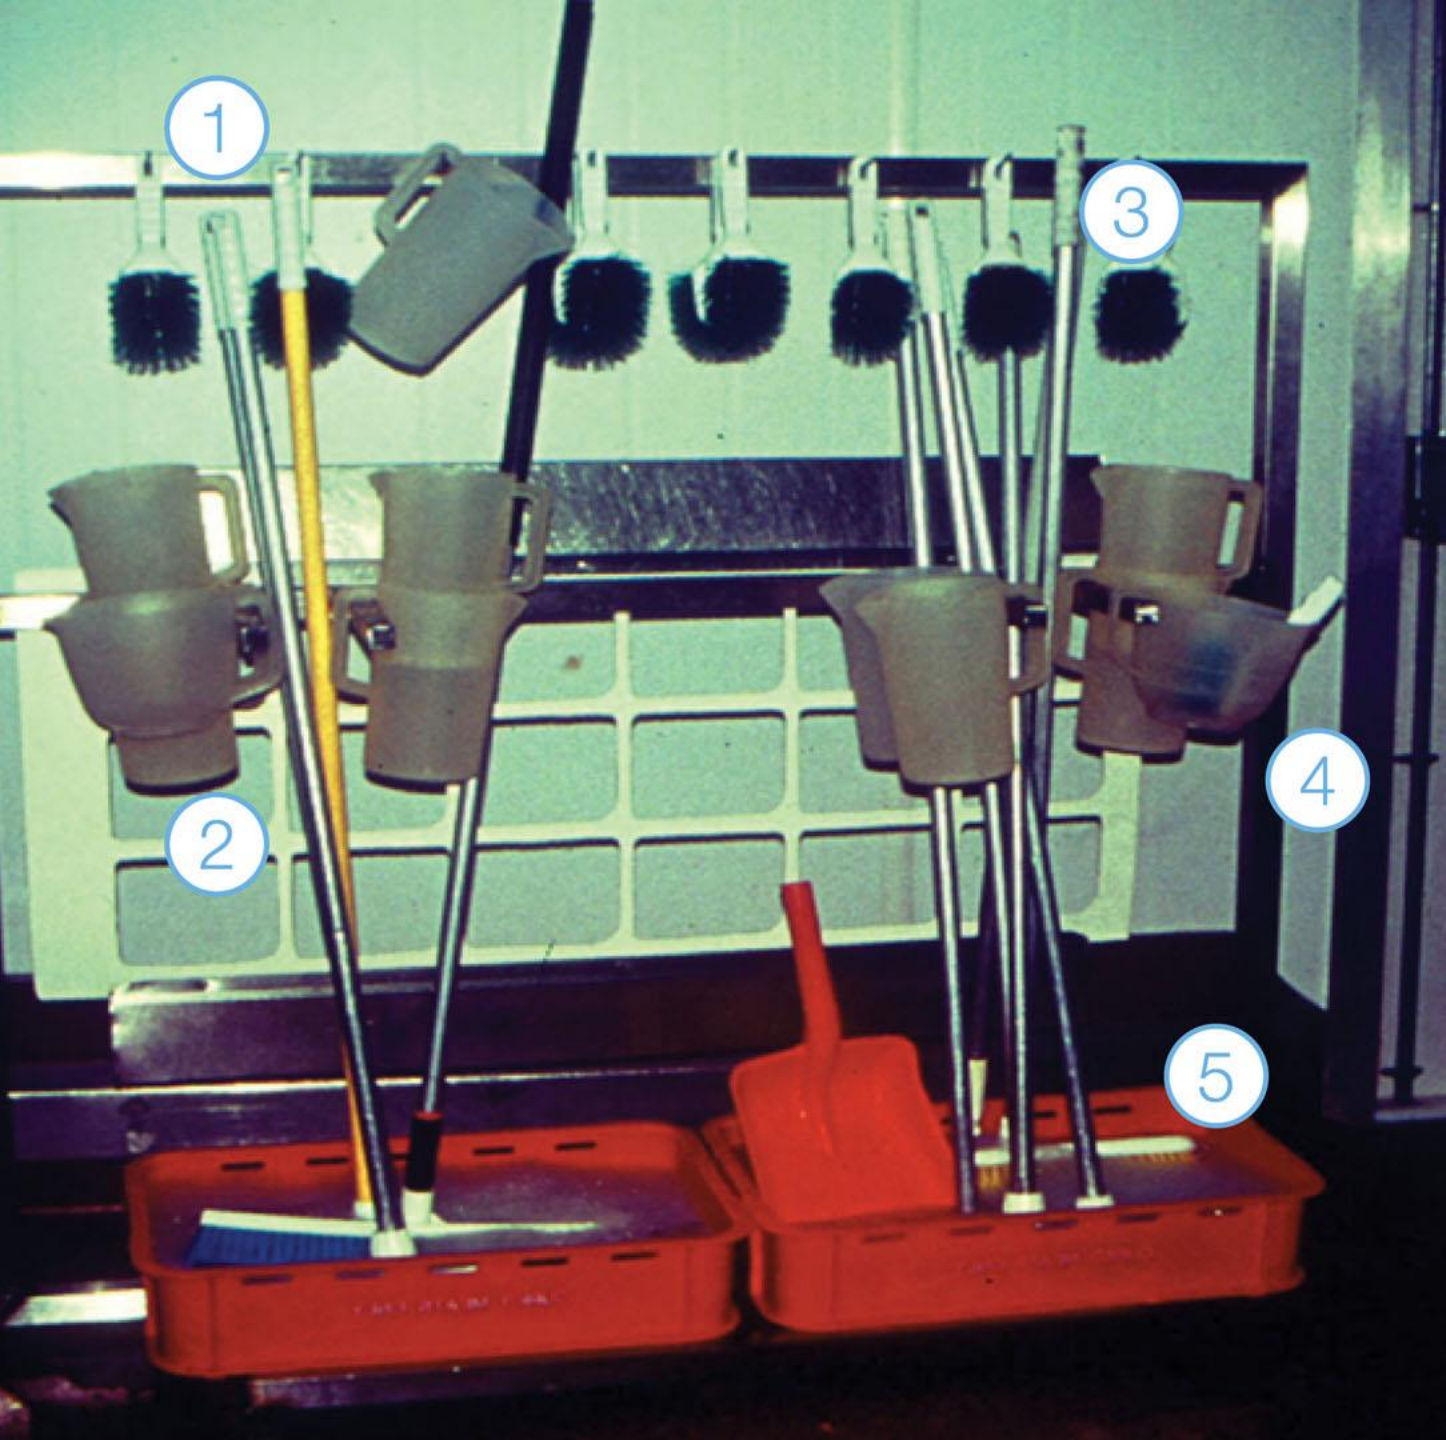

Maintenance & Storage: Equipment Storage

Minimize the risk of cross-contamination:

- Store brushes, squeegees & mops head down
- Equipment should be at least *20 inches above floor height
- Store equipment with heads distant from other equipment handles
- Store clean & dirty equipment separately
- Clean racks & boards regularly

**Retailer Standard Instruction*

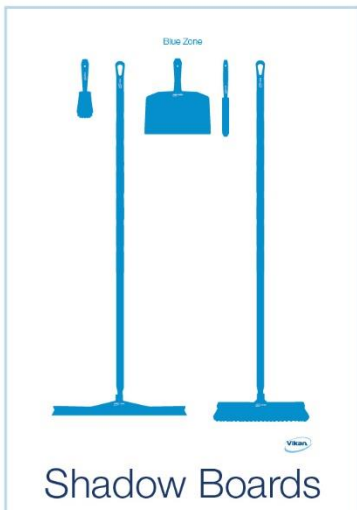

Maintenance & Storage: What to Avoid!!

- 1 Brushes dripping
- 2 Stacked buckets
- 3 Brushes touching handles
- 4 Brush in bucket
- 5 Tools stored in liquid

Maintenance & Storage: Equipment Storage

- minimize product damage
- minimize trips
- minimize cross-contamination
- improve efficacy and assurance - provide a place for equipment to be stored and found when needed

Maintenance & Storage: Equipment Control

Inspection and Replacement

- Cleaning equipment should be regularly inspected for damage and wear and tear, and replaced as appropriate.
- Records of inspection and replacement should be kept.

Improve/Implement 5S Storage
