

Digital electro-pneumatic positioner for integrated mounting on process control valves

- Compact and robust stainless steel design
- Easy start-up with automatic X-Tune function
- Contact-free position sensor
- Integrated pilot air duct with spring chamber aeration
- EtherNet/IP, PROFINET, Modbus TCP, PROFIBUS DP-V1 or Bürkert system bus (büS)

Product variants described in the data sheet may differ from the product presentation and description.

Can be combined with

	Type 2301 ▶ Pneumatically operated 2-way Globe Control Valve
	Type 2300 ▶ Pneumatically operated 2-way angle seat control valve ELEMENT
	Type 2103 ▶ 2/2-way diaphragm valve with pneumatic stainless steel actuator (Type ELEMENT) for decentralised automation
	Hygienic process valves

Type description

The compact positioner device key 8692 is optimised for integrated mounting on the pneumatic actuators in the process valve series Type 23xx/2103 and is specially designed for the requirements of a hygienic process environment. The pilot air duct is integrated into the actuator without external piping. The easy operation and the selection of additional software functions are carried out either on a big graphic display with backlight and keypad or via the COMMUNICATOR.

The positioner registers the valve position without deterioration via a contact-free, analogue position sensor. The integrated diagnostics function are used to monitor control valve operating conditions. Valve diagnostic messages via status signals are issued in accordance with NE107 (NAMUR) and recorded as historical entries.

The housing is easy to clean and features proven IP protection and chemically resistant materials for use in hygienic processing in the food, beverage and pharmaceutical industries. Combined with Bürkert ELEMENT actuators, the pneumatic actuating system enables spring chamber aeration that avoids actuator chamber contamination from the environment.

- Automatic commissioning of control system
- Automatic or manual characteristic curves selection
- Setting of the seal and the maximum stroke threshold respectively
- Parameterization of the positioner
- Limitation of the stroke range
- Limitation of the manipulating speed
- Setting of the moving direction
- Configuration of the binary input
- Signal range splitting on several controllers
- Configuration of an analogue or 2 binary outputs
- Signal fault detection
- Safety position
- Code protection
- Contrast inversion of the display
- Parameterizable diagnostic functions^{1.)}/Binary output (option)
 - Operating-hours counter
 - Path accumulator
 - Position monitoring
 - Graphical display of the dwell time density and movement range
 - Monitoring of the mechanical end positions in the armature
 - Direction reversal counter
 - Temperature monitoring

6. Product installation

6.1. Combination options with pneumatic process valves

Note:

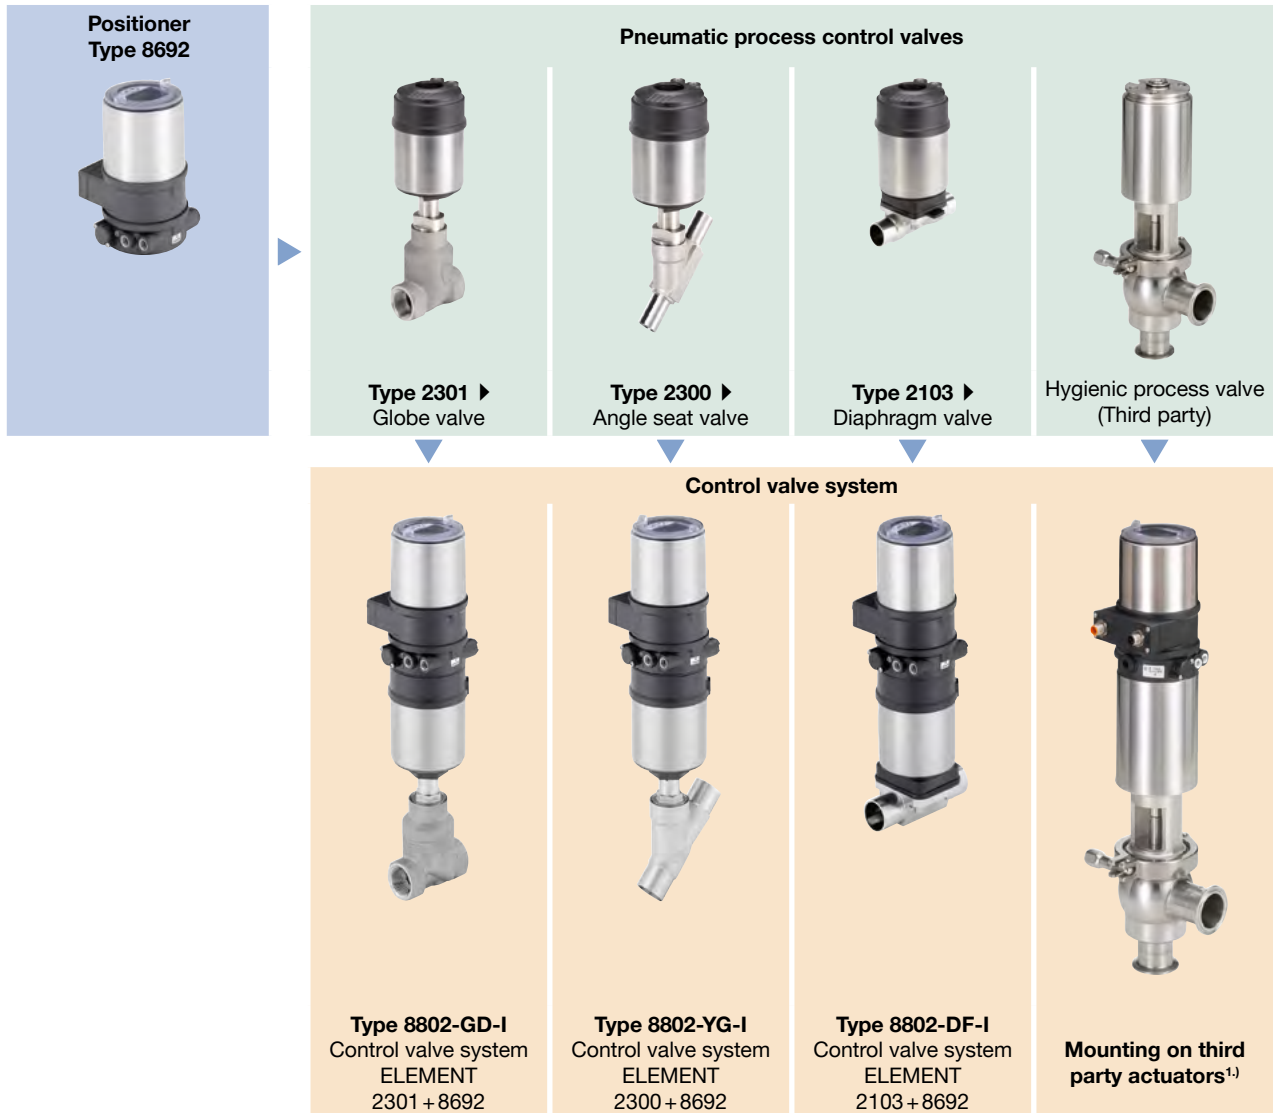

A TopControl Control valve system consists of a **BASIC Positioner Type 8692** and an **ELEMENT control Type 23xx resp. 2103**

The following information is required to select a complete system:

- **Article no.** of the desired positioner TopControl **Type 8692**
- **Article no.** of the desired control valve **Type 23xx/2103** (see separate data sheets, **Type 2301** ▶, **Type 2300** ▶, **Type 2103** ▶)

You order two components and receive a completely assembled and tested valve.

Example for variations of the control valve system

1.) See data sheet **adaptations for third-party drives, KK01** ▶ or contact the appropriate Bürkert sales office.
